In Value Terms, Motor Vehicle Exports Total 14.7 Trillion Yen; Imports Total 2.3 Trillion Yen

In 2021 Japan's gross exports and imports increased from the previous year, by 21.5% and 24.6%, respectively. In value terms, automotive exports rose 15.2% from 2020 to 14.7 trillion yen, and imports grew 20.3% year-on-year to 2.3 trillion yen.

Auto-Related Employment Totals 5.52 Million People

Automobiles are the focus of an extremely wide range of industrial and related activity, from materials supply and vehicle production to sales, servicing, freight shipping and other auto-centered operations. Auto-related employment in Japan at present totals 5.52 million people.

EMPLOYMENT IN THE AUTOMOBILE MANUFACTURING AND AUTO-RELATED INDUSTRIES

Motorcycle Production Totals 647,000 Units

Overall domestic motorcycle production in 2021 expanded 33.5% from the previous year to 647,000 units. By engine capacity, there was an increase in production in every category, with Class 1 motor-driven cycles (50cc and under) growing 16.5% to 142,000 units, Class 2 motor-driven cycles (51cc to 125cc) jumping 41.0% to 54,300 units, mini-sized motorcycles (126cc to 250cc) rising 7.5% to 58,000 units, and small-sized motorcycles (over 250cc) surging 45.3% to 392,000 units. The combined total for larger motorcycles (all those over 50cc) increased 39.2% to 505,000 units.

Motorcycle Sales Total 416,000 Units

Domestic motorcycle sales in 2021 finished at 416,000 units, up 13.7% from the previous year. By engine capacity, sales of Class 1 motor-driven cycles (50cc and under) grew 4.3% to 128,000 units, Class 2 motor-driven cycles (51cc to 125cc) rose 23.5% to 126,000 units, mini-sized motorcycles (126cc to 250cc) climbed 6.1% to 79,000 units, and small-sized motorcycles (over 250cc) expanded 24.0% to 84,000 units. Overall sales of motorcycles with engine capacity over 50cc totalled 288,000 units, an increase of 18.3% over 2020.

Promoting Greater Road Safety

In 2021 road fatalities (defined here as deaths occurring within 24 hours of accident occurrence) in Japan dropped to 2,636, the lowest number recorded since the start of road fatality data compilation by the National Police Agency in 1948. Road accidents and road injuries also declined, for the seventeenth consecutive year, to 305,196 and 362,131 (in number of persons), respectively; the injured included 27,204 people with serious injuries. As the aging of Japan's society advances, annual road accident statistics show a growing ratio of elderly people (aged 65 years and older) in road fatalities. In addition, the number of fatal road accidents per 100,000 driver's license holders attributable to elderly drivers (aged 75 years and older) is the largest among age groups.

ROAD ACCIDENTS/INJURIES/FATALITIES

Year	Accidents (Number of accidents)	Injuries (Number of persons)	Fatalities (Number of persons)
1970	718,080	981,096	16,765
1975	472,938	622,467	10,792
1980	476,677	598,719	8,760
1985	552,788	681,346	9,261
1990	643,097	790,295	11,227
1995	761,794	922,677	10,684
2000	931,950	1,155,707	9,073
2005	934,346	1,157,113	6,937
2010	725,924	896,297	4,948
2011	692,084	854,613	4,691
2012	665,157	825,392	4,438
2013	629,033	781,492	4,388
2014	573,842	711,374	4,113

2021	305,196	362,131	2,636

TRENDS IN ELDERLY ROAD FATALITIES

FATAL ROAD ACCIDENTS PER 100,000 DRIVER'S LICENSE HOLDERS BY AGE GROUP

Note: "Driver's license holders" here refers to drivers possessing valid licenses for driving automobiles, motorcycles, and motor-driven cycles.
Source for all data on this page: National Police Agency

Given the circumstances, Japan's Ministry of Economy, Trade and Industry, Ministry of Land, Infrastructure, Transport and Tourism, National Police Agency, Financial Services Agency and automobile-related organizations have been working cooperatively to promote the widespread use of "safety support cars" (or "sapocars" for short), equipped with advanced safety features such as collision-mitigation braking systems, to help drivers of all ages avoid road accident occurrence and to mitigate damage/injury when accidents do occur.

THE "SAFETY SUPPORT CAR" Ver 1.0 CONCEPT

Safety Support Car (or "Sapocar")	Safety Support Car S (or "Sapocar S")	"Sapocar S" Classification
 Passenger cars equipped with collision-mitigation braking systems; suitable for all drivers	 Passenger cars equipped with collision-mitigation braking systems and accelerator suppression for pedal misapplication; suitable especially for elderly drivers	The "Sapocar S" concept has three sub-classifications, based on the safety features installed.
		Type: "Wide" Collision-mitigation braking system (pedestrian collision avoidance) Accelerator suppression for pedal misapplication (1) Lane departure warning (2) Advanced headlamp control (3)
		Type: "Basic+" Collision-mitigation braking system (vehicle collision avoidance) Accelerator suppression for pedal misapplication (1)
		Type: "Basic" Collision-mitigation braking system (vehicle collision avoidance) for low-speed vehicle operation (4) Accelerator suppression for pedal misapplication (1)

(1) In automatic-transmission vehicles only. (2) Including lane-keeping assist. (3) Automatic high-to-low-beam headlamp control, glare-free high beam headlamp control, or adaptive front-lighting system. (4) 30km/h or lower.

TRENDS IN ONBOARD INSTALLATION RATES OF ADVANCED DRIVER-ASSISTANCE SYSTEMS (ADAS)

Collision-Mitigation Braking System

Acceleration Suppression for Pedal Misapplication

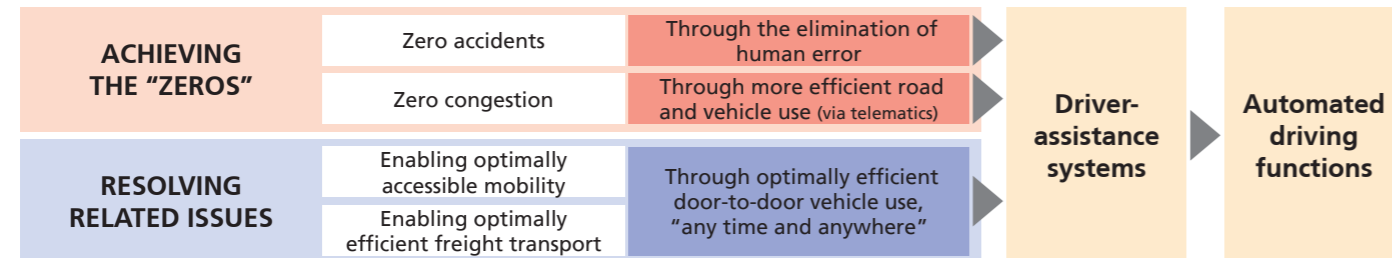

Note: "In %" means the number of passenger cars equipped with the ADAS feature as a percentage of the total number of passenger cars produced for the domestic market.

The Transition to Automated Driving

In 2018 the Japanese government released an outline of the broad spectrum of system-building measures needed for the real-world implementation of automated driving. The adoption in 2020 of a revised Road Traffic Act and a revised Road Vehicles Act made it mandatory for automated driving systems and devices to comply with safety standards. Furthermore, rules were established regarding the obligations of drivers of vehicles equipped with automated driving systems, with the inclusion of automated driving event data recorders in such systems also being mandated. These initiatives allowed Level 3 self-driving vehicles to run on public roads. A further revision of the Road Traffic Act was adopted in 2022 enabling the creation of an authorization system to facilitate Level 4 automated driving (self-driving vehicles used under specific circumstances, e.g., on designated and limited routes). JAMA member companies are actively working towards the practical use of automated driving technologies in line with the initiatives undertaken by the government.

JAMA'S VIEW OF AUTOMATED DRIVING

DEFINITIONS OF DRIVING AUTOMATION LEVELS AND LEVEL-COMPATIBLE VEHICLE DESCRIPTIONS

Level	Definition	In Charge*	Vehicle Description
Driver (human) performs part or all of the dynamic driving task			
Level 0	Driver performs the entire dynamic driving task (DDT).	Driver	—
Level 1	Driver-assistance system performs the subtasks of <i>either</i> longitudinal or lateral vehicle motion control (within a limited operational design domain), while the driver performs all other DDT subtasks.	Driver	Vehicles with driver-assistance systems
Level 2	Advanced driver-assistance system performs the subtasks of <i>both</i> longitudinal and lateral vehicle motion control (within a limited operational design domain), monitored by the driver who performs all other DDT subtasks and can take manual control at any time.	Driver	
Automated driving system ("ADS," "system") performs the entire dynamic driving task (while engaged)			
Level 3	ADS performs the entire DDT (within a limited operational design domain). However, driver must remain alert and respond appropriately to ADS-issued requests to intervene when ADS cannot execute a task (= human override).	System (Driver, when ADS cannot execute a task)	Vehicles with conditional driving automation
Level 4	ADS performs the entire DDT (within a limited operational design domain) and responds in the event of operational difficulty. However, Level 4 vehicles can operate only under specific circumstances, with human override remaining an option.	System	Vehicles with high driving automation
Level 5	ADS performs the entire DDT and responds unconditionally (<i>not</i> within a limited operational design domain) in the event of operational difficulty, with no need for human intervention.	System	Vehicles with full driving automation

*I.e., performing all the requisite processes of recognition, prediction, judgment, and operation.

Climate Change and CO2 Emissions Reduction: The Response of the Transport Sector

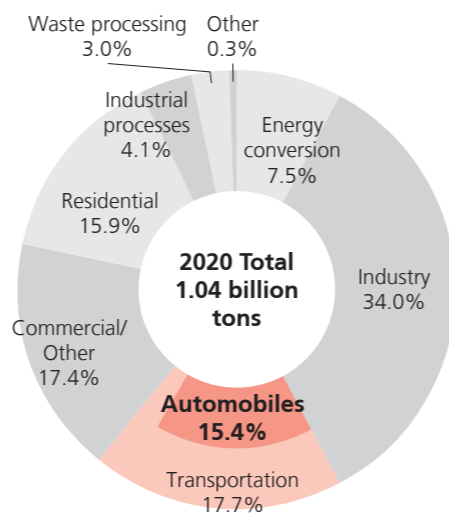

In 2020 Japan's CO2 emissions totalled 1.04 billion tons (actual figure), of which the transportation sector accounted for nearly 18%. Since peaking in 2001 following a decade of growth, CO2 emission volumes in Japan's transport sector have steadily declined, owing largely to increased fuel efficiency in passenger cars and greater efficiency in goods distribution. The automobile industry will continue to vigorously promote CO2 emissions reduction in road transport by further improving vehicle fuel efficiency and expanding the market supply of next-generation vehicles.

CO2 EMISSIONS IN JAPAN

The transportation sector accounts for nearly 18% of Japan's total CO2 emissions, which in 2020 amounted to 1.04 billion tons (actual figure).

CO2 Emission Shares by Sector in 2020

Source: Ministry of the Environment

TRENDS IN CO2 EMISSION VOLUMES IN JAPAN'S TRANSPORT SECTOR, BY MODE

Motor vehicle-emitted CO2 accounts for about 87% of the totality of CO2 emitted by Japan's transport sector. CO2 emissions from road transportation in Japan have seen a significant decrease since transport-sector emissions peaked in 2001.

Source: Ministry of the Environment

CO2 Emissions Reduction: Improving Vehicle Fuel Efficiency

Fuel efficiency targets for passenger cars, trucks, and buses are formulated by applying "top runner" criteria whereby the target value for a given vehicle weight category is established based on the leading fuel efficiency performance to date for that weight category. To comply, first, with stringent 2015 average fuel efficiency targets for small trucks and buses and heavy-duty vehicles as well as with a 2020 target for passenger cars and, subsequently, with an even stricter 2022 target for small trucks, 2025 targets for heavy-duty vehicles, and a 2030 target for passenger cars, JAMA member manufacturers have been making continuous efforts to increase the fuel efficiency of conventional vehicles and expand the supply of alternative-energy vehicles. Calculation of the average fuel efficiency target of 25.4 km/L (a 32.4% increase over the actual value in 2016) established for 2030 for new passenger cars took into account, for the first time, the fuel efficiency performances of electric vehicles and plug-in electric vehicles.

2020 AVERAGE FUEL EFFICIENCY TARGET FOR NEW PASSENGER CARS (1)

2030 AVERAGE FUEL EFFICIENCY TARGET FOR NEW PASSENGER CARS (2)

(1) Fuel efficiency is JC08 test cycle-based (see page 18). (2) Fuel efficiency is WLTC-based (see page 18). (3) Targets were established assuming the same shipment volume ratios by vehicle weight category for target years as those recorded in the years showing the actual value of fuel efficiency performance. Sources: Ministry of Economy, Trade and Industry; Ministry of Land, Infrastructure, Transport and Tourism

AVERAGE FUEL EFFICIENCY OF DOMESTIC NEW GASOLINE-POWERED PASSENGER CARS In km/L

Note: Figures here are JC08 test cycle-based through 2016 and WLTC-based from 2017 (see page 18). Figures for 2020 are under ongoing revision owing to the adoption of WLTC and will therefore appear in next year's edition of this report. Source: Japan Automobile Manufacturers Association

2015 AVERAGE FUEL EFFICIENCY TARGETS FOR NEW SMALL TRUCKS & BUSES (4)

2022 AVERAGE FUEL EFFICIENCY TARGET FOR NEW SMALL TRUCKS (4)

(4) Fuel efficiency is JC08 test cycle-based (see page 18). (5) Targets were established assuming the same shipment volume ratios by vehicle weight category for target years as those recorded in the years showing the actual value of fuel efficiency performance. Sources: Ministry of Economy, Trade and Industry; Ministry of Land, Infrastructure, Transport and Tourism

2015 AVERAGE FUEL EFFICIENCY TARGETS FOR NEW HEAVY-DUTY VEHICLES (GVW>3.5t) (6)

2025 AVERAGE FUEL EFFICIENCY TARGETS FOR NEW HEAVY-DUTY VEHICLES (GVW>3.5t)

(6) Fuel efficiency is JE05 test cycle-based. (7) Targets were established assuming the same shipment volume ratios by vehicle weight category for target years as those recorded in the years showing the actual value of fuel efficiency performance. (8) While the 2015 target values for new heavy-duty vehicles are JE05 test cycle-based, the 2025 target values were established on the basis of a new measuring method. (9) Targets were established assuming the same shipment volume ratios by vehicle weight category for 2025 as those recorded in 2014. VEHICLE TECHNOLOGIES FOR INCREASED FUEL EFFICIENCY

Improved engine efficiency: More efficient fuel consumption, Reduced aerodynamic drag, Reduced vehicle weight, Improved powertrain performance, Reduced rolling resistance, Other.

In-Use Status of Next-Generation Vehicles

Since 2009, when the government's tax incentive/subsidy programs for the purchase of eco-friendly vehicles were first introduced, new registrations of (so-called in Japan) next-generation vehicles—including hybrid, plug-in hybrid, electric, fuel cell, clean diesel, and other new-energy vehicles—have been steadily increasing. As a result of each automaker's efforts to develop a range of such models, the share of next-generation vehicles in new passenger car registrations in 2021 exceeded 44%. The more widespread use of these vehicles requires not only further advances in vehicle and related technologies, but also, among other government initiatives, the establishment of the necessary fuel/energy supply infrastructures and the continued provision of purchasing incentives.

● NEXT-GENERATION PASSENGER CAR NEW REGISTRATIONS, 2008-2021

In vehicle units

Year	Hybrid vehicles	Plug-in hybrid vehicles	Electric vehicles	Fuel cell vehicles	Clean diesel vehicles	Total
2008	108,518	0	0	0	0	108,518
2009	347,999	0	1,078	0	4,364	353,441
2010	481,221	0	2,442	0	8,927	492,590

● TRENDS IN NEXT-GENERATION VEHICLE SHARE IN NEW PASSENGER CAR REGISTRATIONS

CO₂ Reductions at Manufacturers' Facilities

Japan's automakers, together with the member companies of the Japan Auto-Body Industries Association (JABIA), have for years taken measures to reduce energy consumption and otherwise cut CO₂ emissions at their production plants. Having more recently expanded their voluntary CO₂ reduction activities to also include administrative and research facilities, their combined facility-emitted CO₂ in 2020 totalled 5.20 million tons (preliminary figure), down 620,000 tons from the previous year. Thereby largely surpassing their 2020 and 2030 targets, JAMA and JABIA member companies will strive for further CO₂ reductions at their facilities.

● FACILITY-GENERATED CO₂ EMISSION VOLUMES, 1990-2020

Voluntary Initiatives to Eliminate the Use of Four Heavy Metals in Motor Vehicles

JAMA member manufacturers have, on a voluntary basis, eliminated the use of four heavy metals—lead, mercury, hexavalent chromium and cadmium—in new vehicles to lessen their environmental impact, particularly when they are dismantled and processed at the end of their service life. Restrictions on the use of these substances in motorcycles have been established separately.

● RESTRICTIONS ON THE USE OF FOUR HEAVY METALS IN NEW VEHICLES & COMPLIANCE STATUS

Substance	Restrictions	Compliance Status
Lead	As of January 2006, a 90% decrease or more from the 1996 level of 1,850 grams (i.e., a maximum permissible level of 185 grams).* For large commercial vehicles including buses, a 75% decrease or more from the 1996 level. *Batteries are exempt.	All models have complied since January 2006.
Mercury	As of January 2005, banned except for trace amounts in safety-related components such as: - Instrument panel displays - Liquid crystal displays in navigation devices - Discharge lamps - Fluorescent cabin lamps	All models have complied since January 2003. Components listed here in the left column are now mercury-free in all models.
Hexavalent chromium	Banned as of January 2008.	All models are in compliance.
Cadmium	Banned as of January 2007.	All models have complied since January 2006.

A Voluntary Approach to Reducing Vehicle Cabin VOCs

Established in January 2002 by Japan's Ministry of Health, Labor and Welfare, target values for indoor concentration levels of 13 volatile organic compounds (VOCs) were amended in January 2019, with a view to enabling automakers, on a voluntary basis, to meet the revised target values in all new-model vehicles marketed from January 2022. To measure VOC concentration levels in vehicle cabin air, JAMA-developed in-cabin test procedures covering passenger cars as well as trucks and buses were introduced in 2005. However, JAMA's test procedure for passenger cars was replaced by a procedure based on an ISO standard when the latter was established, in July 2012, as the global standard for testing in-cabin VOCs in passenger cars. On the other hand, JASO test methods based on the JAMA-developed procedure for measuring in-cabin VOC concentration levels in trucks and buses (which are not covered by the ISO standard) remain in application. Meanwhile, automakers are continuously working to achieve further reductions in in-cabin VOC concentration levels.

● TARGET VALUES FOR INDOOR CONCENTRATION LEVELS OF 13 SUBSTANCES (VOCs) (revised in January 2019)

Substance	Target Value for Indoor Concentration Level	Principal Sources
Formaldehyde	100 µg/m ³ (0.08 ppm)	Adhesives for plywood, wallpaper, etc.
Toluene	260 µg/m ³ (0.07 ppm)	Adhesives/paints for interior finishing materials, furniture, etc.
Xylene	200 µg/m ³ (0.05 ppm)	Adhesives/paints for interior finishing materials, furniture, etc.
Paradichlorobenzene	240 µg/m ³ (0.04 ppm)	Moth repellents, lavatory air fresheners
Ethylbenzene	3,800 µg/m ³ (0.88 ppm)	Adhesives/paints for plywood, furniture, etc.
Styrene	220 µg/m ³ (0.05 ppm)	Insulation materials, bath units, tatami-mat core materials
Chlorpyrifos	1 µg/m ³ (0.07 ppb)	Insecticides (esp. ant exterminators)
Di-n-butyl phthalate	17 µg/m ³ (1.5 ppb)	Paints, pigments, adhesives
Tetradecane	330 µg/m ³ (0.04 ppm)	Kerosene, paints
Di-2-ethylhexyl phthalate	100 µg/m ³ (6.3 ppb)	Wallpaper, flooring materials, wire-coating materials
Diazinon	0.29 µg/m ³ (0.02 ppb)	Pesticides
Acetaldehyde	48 µg/m ³ (0.03 ppm)	Adhesives for construction materials, wallpaper, etc.
Fenobucarb	33 µg/m ³ (3.8 ppb)	Insecticides (esp. termite exterminators)

Notes: 1. This voluntary initiative applies only to vehicles that are manufactured and sold in Japan. 2. The use of paradichlorobenzene, chlorpyrifos, diazinon and fenobucarb does not apply to vehicle cabins.

Vehicle Recycling and Waste Reduction

Under Japan's End-of-Life Vehicle (ELV) Recycling Law which entered into force in January 2005, automobile manufacturers and importers are responsible for recovery, recycling and appropriate disposal with respect to fluorocarbons, airbags, and automobile shredder residue (ASR). Compliance with the law was anticipated to enable ASR to be recycled at a rate of 70% by 2015, resulting in an automobile recycling rate, by vehicle weight, of 95% (as compared with the 80% rate prevailing prior to the introduction of the law); those rates were in fact surpassed in 2008. Japan's vehicle recycling infrastructure as mandated by its ELV Recycling Law is the first in the world to administer the entire process of auto recycling—from ELV recovery to final disposal—on the basis of electronic “manifests” (or compliance checklists). In line with legislative provisions promoting the so-called 3R initiatives (“reduce, reuse, and recycle”), Japan's automakers are also striving to design vehicles using lightweight materials that are easy to dismantle and recycle, and to reduce and recycle waste generated in the manufacturing process. In 2020 the volume of auto plant-generated waste destined for landfill disposal totalled 400 tons. Having long surpassed the target of 1,000 tons set for 2020, JAMA members will nevertheless continue to promote the reduction of plant-generated waste for landfill disposal.

INDUSTRY MEASURES IN LINE WITH NATIONAL LEGISLATION

	Promotion of Effective Utilization of Resources Law (the “3R” Law)		End-of-Life Vehicle Recycling Law
	Product Design	Waste Management	
Distribution, Servicing and Use	“Reduce” initiatives For designated products (1): - Weight reduction/ Downsizing - Longer product life - Reduced use of hazardous substances	For designated areas of activity: - Reduction/recycling of designated waste products generated in vehicle manufacturing operations: 1) Scrap metals 2) Casting sand residue	ELV Recycling Basic premise: - Environmentally responsible vehicle design on the part of automobile manufacturers
	“Reuse” initiatives For designated products (2): - Use of reusable/recyclable materials		
	“Recycle” initiatives - Ease of dismantling - Ease of sorting - Non-hazardous recycling - Materials identification	- Total waste volume:* 1990 (baseline): 352,000 tons ↓ 2020: 400 tons JAMA target: 1,000 tons by fiscal 2020 *For landfill disposal, including scrap metals, casting sand residue, and other waste	- Recovery and recycling of: 1) Fluorocarbons 2) Airbags 3) ASR Note: Motorcycles are not covered by the ELV Recycling Law.

(1) Nineteen products including automobiles have been designated in this legislation as requiring “reduce” initiatives in their design. (2) Twenty-three products including automobiles have been designated in this legislation as requiring “reuse” and “recycle” initiatives in their design.

ELV RECOVERY IN NUMBERS

Fiscal Year		2020 (Actual)	2021 (Preliminary)
No. of ELVs recovered		3,146,948	3,042,462
Appropriate recovery of three designated items	Fluorocarbons	2,778,982	2,678,183
	Airbags (1)	2,694,961	2,644,525
	ASR (2)	3,025,343	2,956,837

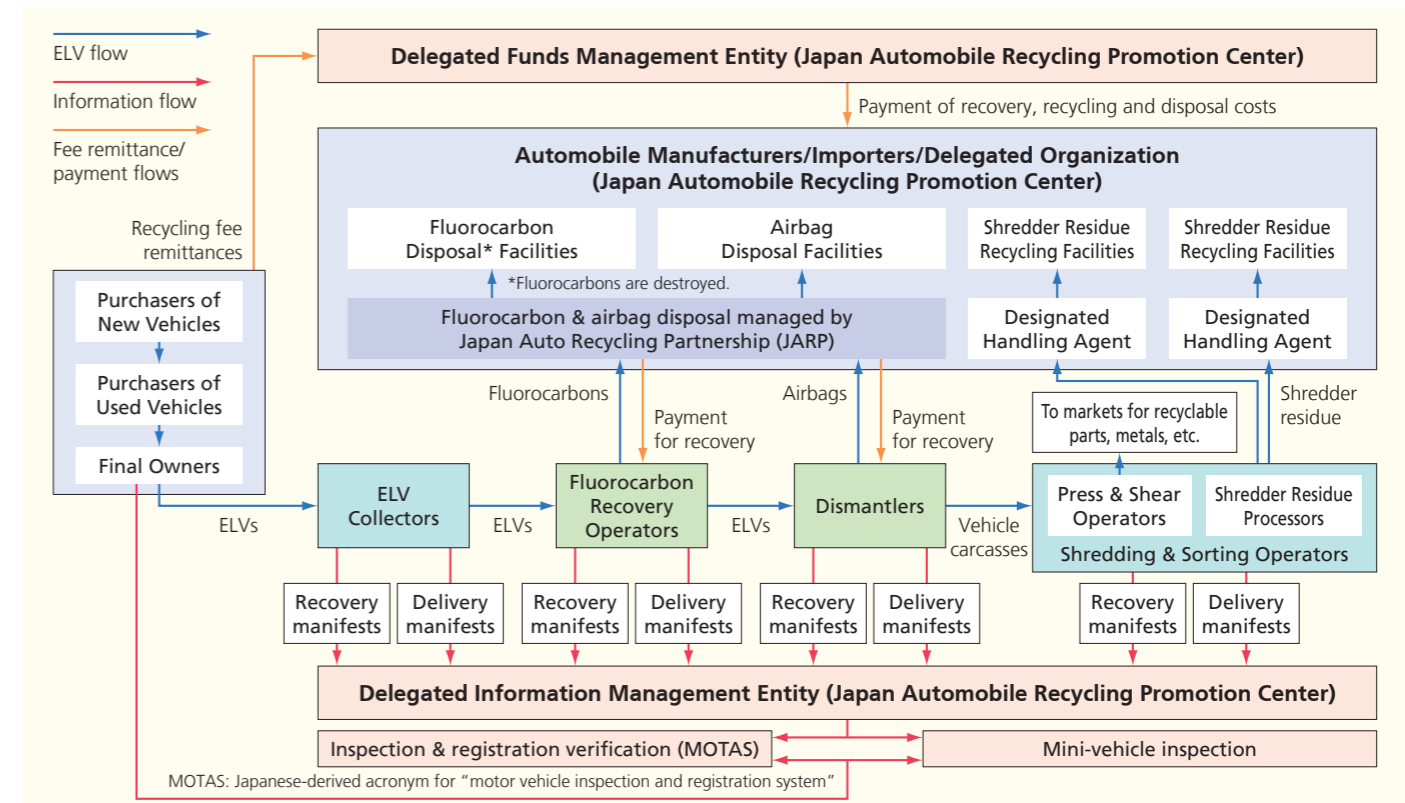

(1) Through recovery/appropriate disposal of inflators or through onboard deactivation. (2) Covers all categories of processors, whether for direct disposal or for transfer to other markets. Sources: Japan Automobile Recycling Promotion Center; Japan Auto Recycling Partnership; Toyotsu Recycle Corporation; *ART group of companies

RECYCLING RATES: TARGETED & ACHIEVED

Three Designated Items	Target	Achieved
Fluorocarbons	Destruction	2.78 million vehicle units (2020)
Airbags	85%	95-96% (2020)
ASR	2005: 30% 2010: 50% 2015: 70%	95-97.5% (2020)

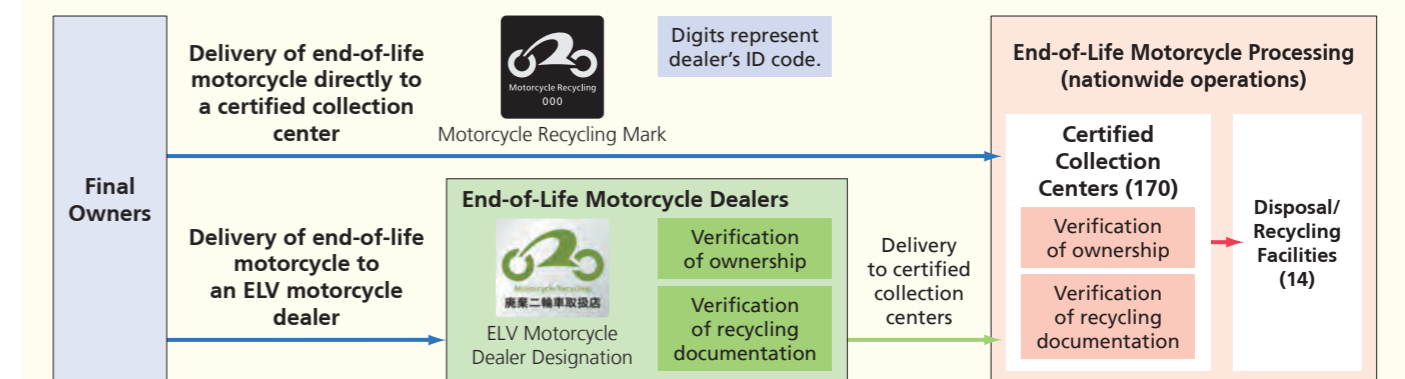

Sources: Government-affiliated entities

THE ELV RECYCLING FLOW (as per the provisions of the End-of-Life Vehicle Recycling Law)

Note: The Japan Automobile Recycling Promotion Center assumes the same responsibilities as automobile manufacturers and importers when an ELV has no manufacturer representation under the provisions of this law. It also assumes transport-to-mainland costs for ELVs turned in on Japan's smallest islands.

THE MOTORCYCLE RECYCLING FLOW

Notes: 1. The only cost to final owners (where applicable) is for the delivery by ELV dealers of end-of-life motorcycles to certified collection centers. 2. The disposal of municipally-owned end-of-life motorcycles requires advance approval by the Japan Automobile Recycling Promotion Center. Source: Japan Automobile Recycling Promotion Center

Global Harmonization in the Regulation of Vehicle Exhaust Emissions

Japan's vehicle exhaust emissions regulations have always been among the world's most stringent, and its automakers have worked very hard to develop the advanced technologies required to comply with them. As a result, NOx and other atmospheric pollutant levels have been, even in large urban areas, on a steady decline. Japan has participated in international discussions on the global harmonization of emission test cycles and in 2010 introduced the UN test cycle for motorcycle emissions. In 2018 Japan adopted the UN "WLTC" to measure emissions from new gasoline-powered passenger cars and light commercial vehicles, following its adoption in 2016 of the UN "WHTC" for measuring diesel exhaust emissions from new heavy-duty vehicles (see corresponding notes below).

● MOTOR VEHICLE EMISSIONS REGULATIONS IN JAPAN

Vehicle Type		Current Regulations				
		Test cycle	Year enforced	Emission	Regulatory value (average)	
Gasoline and LPG Vehicles	Passenger cars	WLTC (g/km) (1)	2018	CO NMHC NOx	1.15 0.10 0.05	
		WLTC (g/km) (1)	2018	PM (2)	0.005	
	Trucks and buses	Mini	WLTC (g/km) (1)	2019	CO NMHC NOx	4.02 0.10 0.05
			WLTC (g/km) (1)	2019	PM (2)	0.005
		Light-duty (GVW≤1.7t)	WLTC (g/km) (1)	2018	CO NMHC NOx	1.15 0.10 0.05
			WLTC (g/km) (1)	2018	PM (2)	0.005
		Medium-duty (1.7t<GVW≤3.5t)	WLTC (g/km) (1)	2018	CO NMHC NOx	2.55 0.15 0.07
			WLTC (g/km) (1)	2019	PM (2)	0.007
	Heavy-duty (GVW>3.5t)	JE05 (g/kWh)	2009	CO NMHC NOx PM (2)	16.0 0.23 0.7 0.010	
	Diesel Vehicles	Passenger cars (3)	WLTC (g/km) (1)	2018	CO NMHC NOx PM	0.63 0.024 0.15 0.005
WLTC (g/km) (1)			2018	CO NMHC NOx PM	0.63 0.024 0.15 0.005	
Trucks and buses		Light-duty (GVW≤1.7t)	WLTC (g/km) (1)	2018	CO NMHC NOx PM	0.63 0.024 0.15 0.005
			WLTC (g/km) (1)	2019	CO NMHC NOx PM	0.63 0.024 0.24 0.007
Medium-duty (1.7t<GVW≤3.5t)		WLTC (g/km) (1)	2016	CO NMHC NOx PM	2.22 0.17 0.4 0.010	
		WHTC (g/kWh) (4)	2016	CO NMHC NOx PM	2.22 0.17 0.4 0.010	
Motorcycles	Class I, Class II, and Class III motorcycles	WMTC (g/km) (5)	2020	CO	1.00	
				THC	0.10	
				NMHC	0.068	
				NOx	0.060	
				PM	0.0045	

Class I motorcycles: Over 0.050L and under 0.150L in engine capacity with a maximum speed of ≤50 km/h, or under 0.150L in engine capacity with a maximum speed of >50 km/h and <100 km/h. Equivalent to motor-driven cycles, Class 1 and Class 2.
 Class II motorcycles: Under 0.150L in engine capacity with a maximum speed of ≥100 km/h and <130 km/h, or 0.150L or over in engine capacity with a maximum speed of <130 km/h. Equivalent to mini-sized and small-sized motorcycles with a maximum speed of <130 km/h.
 Class III motorcycles: With a maximum speed of ≥130 km/h. Equivalent to mini-sized and small-sized motorcycles with a maximum speed of ≥130 km/h.

(1) WLTC: Worldwide Harmonized Light Vehicle Test Cycle, on the basis of values measured in cold-start state. (2) PM values apply only to direct-injection, lean-burn vehicles.
 (3) Small-sized diesel passenger cars have an equivalent inertia weight (EIW) of 1.25t (GVW of 1.265t) or less, and mid-sized diesel passenger cars have an EIW over 1.25t. (4) WHTC: World Harmonized Transient Cycle, on the basis of (values measured in cold-start state) x 0.14 + (values measured in warm-start state) x 0.86. (5) WMTC: World Motorcycle Test Cycle.
 Note: CO: Carbon monoxide; NMHC: Non-methane hydrocarbons; NOx: Nitrogen oxides; PM: Particulate matter; THC: Total hydrocarbons.

Japan's Test Cycles for Measuring Fuel Consumption and Exhaust Emissions

Japan not only promotes the international standardization of test cycles for measuring motor vehicle fuel consumption and CO₂ and other emissions but has actively contributed to the development of the Worldwide Harmonized Light Vehicle Test Cycle (also referred to as the Worldwide Harmonized Light-Duty Test Cycle), or WLTC, under the United Nations' World Forum for Harmonization of Vehicle Regulations. In line with that initiative, Japan is now in the process of replacing its JC08 test cycle for passenger cars and other non-heavy-duty vehicles with WLTC. WLTC incorporates three driving cycles: the "urban, rural and expressway modes," as they are called in Japanese. The indication wherever necessary of fuel consumption rates measured in the three driving "modes" as well as their certified mean (i.e., average) rate has been required since October 2018.

● COMPARISON OF THE JC08 TEST CYCLE AND WLTC FOR LIGHT VEHICLES

● HOW LIGHT-VEHICLE FUEL CONSUMPTION RATES (EXAMPLES) ARE INDICATED IN JAPAN

Measured on the basis of the JC08 test cycle

Fuel consumption rate (1) certified by the Ministry of Land, Infrastructure, Transport and Tourism

JC08

21.4 km/L

(1) Fuel consumption rates are obtained on the basis of designated test conditions. In real-world on-road driving, rates will vary as a result of multiple factors (weather and traffic conditions, driving behavior, use of air conditioner, etc.).

Measured on the basis of WLTC

Fuel consumption rate (1) certified by the Ministry of Land, Infrastructure, Transport and Tourism

WLTC

20.4 km/L

Urban mode (2) **15.2km/L**
 Rural mode (2) **21.4km/L**
 Expressway mode (2) **23.2km/L**

(1) Fuel consumption rates are obtained on the basis of designated test conditions. In real-world on-road driving, rates will vary as a result of multiple factors (weather and traffic conditions, driving behavior, use of air conditioner, etc.).
 (2) WLTC is an international test cycle incorporating urban, rural and expressway driving cycles or "modes" with specific time durations designated for each mode.
 Urban mode: (Assumptions) Low-speed driving characterized by frequent stops and starts owing to numerous traffic signals and congestion
 Rural mode: (Assumptions) Steady driving characterized by fewer stops and starts owing to fewer traffic signals and less congestion than in urban driving
 Expressway driving mode: (Assumptions) High-speed driving typical of highway driving

9 Trillion Yen in Annual Automobile-Related Tax Revenue

Since the initial earmarking of funds for road construction and road maintenance programs in line with Japan's first five-year road improvement plan in 1954, there has been a steady increase both in the number of automobile-related taxes assessed on users and in their respective rates. Currently, the automobile tax structure consists of nine different taxes, creating a very heavy tax burden for motor vehicle owners in Japan. Under the government's budget for fiscal 2022, the total value of tax revenue from these automobile-related taxes has been estimated at 9.0 trillion yen, or 7.9% of Japan's projected total tax revenue of 111 trillion yen in fiscal 2022.

TAX REVENUE (Estimated) BY SOURCE IN FISCAL 2022 (as per Japan's fiscal 2022 budget)

Notes: 1. Automobile-related consumption tax revenue is not included in the "Consumption tax" segment in the chart on the left, but is included in the breakdown of automobile-related tax revenue appearing in the chart on the right. 2. Automobile-related consumption tax revenue values (including the consumption tax revenue from automobile servicing, not shown but included in figures here) have been calculated by JAMA. 3. The consumption tax is a national sales tax, of which 2.2% of the revenue is redistributed as revenue to local governments. Sources: Ministry of Finance; Ministry of Internal Affairs and Communications

JAPAN'S ESTIMATED AUTOMOBILE-RELATED TAX REVENUE IN FISCAL 2022

		Tax Revenue (x 100 million yen)		Base Tax Rate (for reference)	Current Tax Rate	Comparison with Base Tax Rate (multiplier value)
Taxes on Automobiles	On acquisition During ownership	Environmental performance-based tax	1,657	0 to 3%	0 to 3% (commercial and mini-vehicles excluded)	1.00
		Consumption tax (on automobiles)	18,388		10%	
		Tonnage tax	6,766	¥2,500/0.5t/year (e.g., passenger cars for private use)	¥4,100/0.5t/year (e.g., passenger cars for private use)	1.64
		Automobile tax	15,283	Based on engine capacity (e.g., for 1,001≤1,500cc passenger cars for private use, ¥30,500/year; see below)		
		Mini-vehicle tax	2,943	¥10,800/year (passenger cars for private use)		
Total		45,037				
Taxes on Fuels	While in use	Gasoline tax	20,790	¥24.3/L	¥48.6/L	2.00
		Regional gasoline excise tax	2,225	¥4.4/L	¥5.2/L	1.18
		Diesel handling tax	9,307	¥15.0/L	¥32.1/L	2.14
		LPG tax	100		¥17.5/kg	1.00
		Consumption tax (on fuels)	10,709		10%	
		Total	43,131			
Grand Total		88,168				

Notes: 1. Consumption tax revenue values (including the consumption tax revenue from automobile servicing, not shown but included in figures here) have been calculated by JAMA. 2. Current tax rates effective as of May 1, 2022.

TAX RATES IN EFFECT (Examples), 1954-2021, TO SUPPORT ROAD NETWORK IMPROVEMENTS

Duration	"Five-Year" Plan	Fiscal Year	Acquisition Tax	Environmental Performance-Based Tax	Tonnage Tax ¥/0.5t/year	Gasoline Tax ¥/L	Regional Gasoline Excise Tax ¥/L	Diesel Handling Tax ¥/L	LPG Tax ¥/kg

Tax Incentives to Promote the Wider Use of Eco-Friendly Vehicles

To help expedite the shift to low-carbon road transport in the interest of curbing global warming and to help improve air quality, the Japanese government has, since April 2009, applied auto-related tax incentives to promote the wider use of eco-friendly vehicles. Updated incentives and eligibility requirements came into effect in April and May 2021 and their effective periods were extended for two years. Incentives for the acquisition tax expired at the end of September 2019 when the acquisition tax was abolished.

INCENTIVES & ELIGIBILITY REQUIREMENTS

● TONNAGE TAX REDUCTIONS/EXEMPTIONS

Period in effect: May 1, 2021 through April 30, 2023.

1. Passenger Cars

Requirements	When Imposed	Reductions/Exemptions
<ul style="list-style-type: none"> Electric vehicles Fuel cell vehicles Natural gas vehicles (complying with 2018 emission standards) Plug-in hybrid vehicles 	@ Initial & first vehicle inspections	Exempt (1)
<ul style="list-style-type: none"> Clean diesel passenger cars (complying with 2009 or 2018 emission standards) 		Exempt (2), (4)
Gasoline vehicles/LPG vehicles (including hybrids)	Fuel efficiency	2030 Fuel Efficiency Standards (3)
	Emissions level	-40% -30% -25% -15% -10% Compliant
Down by 50% from 2018 standards	@ Initial vehicle inspection	25% reduction 50% reduction Exempt (4)

2. Small Trucks (GVW≤2.5t)

Requirements	When Imposed	Reductions/Exemptions
<ul style="list-style-type: none"> Electric vehicles Fuel cell vehicles Natural gas vehicles (with NOx emissions down by 10% from 2009 emission standards, or complying with 2018 emission standards) Plug-in hybrid vehicles 	@ Initial & first vehicle inspections	Exempt (1)
Gasoline vehicles (including hybrids)	Fuel efficiency	2015 Fuel Efficiency Standards
	Emissions level	+5% +10% +15% +20% +25%
Down by 75% from 2005 standards or Down by 50% from 2018 standards	@ Initial vehicle inspection	25% reduction 50% reduction 75% reduction Exempt

3. Mid-Sized Trucks (2.5t < GVW ≤ 3.5t)

Requirements	When Imposed	Reductions/Exemptions
<ul style="list-style-type: none"> Electric vehicles Fuel cell vehicles Natural gas vehicles (with NOx emissions down by 10% from 2009 emission standards, or complying with 2018 emission standards) Plug-in hybrid vehicles 	@ Initial & first vehicle inspections	Exempt (1)
Gasoline vehicles (including hybrids)	Fuel efficiency	2015 Fuel Efficiency Standards
	Emissions level	+5% +10% +15%
Down by 75% from 2005 standards or Down by 50% from 2018 standards	@ Initial vehicle inspection	50% reduction 75% reduction Exempt
		No incentive 50% reduction 75% reduction
Diesel vehicles (including hybrids)	NOx and PM emissions down by 10% from 2009 standards or Compliant with 2018 emission standards	50% reduction 75% reduction Exempt
		Compliant with 2009 emission standards

4. Small and Mid-Sized Buses (GVW≤3.5t)

Requirements	When Imposed	Reductions/Exemptions
<ul style="list-style-type: none"> Electric vehicles Fuel cell vehicles Natural gas vehicles (with NOx emissions down by 10% from 2009 emission standards) Plug-in hybrid vehicles 	@ Initial & first vehicle inspections	Exempt (1)
Gasoline vehicles (including hybrids)	Fuel efficiency	2020 Fuel Efficiency Standards
	Emissions level	Compliant +5% +10%
Down by 75% from 2005 standards or Down by 50% from 2018 standards	@ Initial vehicle inspection	75% reduction Exempt
		50% reduction 75% reduction Exempt
Diesel vehicles (including hybrids)	NOx and PM emissions down by 10% from 2009 standards or Compliant with 2018 emission standards	75% Exempt
		Compliant with 2009 emission standards

5. Heavy-Duty Trucks and Buses (GVW > 3.5t)

Requirements	When Imposed	Reductions/Exemptions
<ul style="list-style-type: none"> Electric vehicles Fuel cell vehicles Natural gas vehicles (with NOx emissions down by 10% from 2009 emission standards) Plug-in hybrid vehicles 	@ Initial & first vehicle inspections	Exempt (1)
Diesel vehicles (including hybrids)	Fuel efficiency	2015 Fuel Efficiency Standards
	Emissions level	+5% +10% +15%
Compliant with 2016 emission standards	@ Initial vehicle inspection	50% reduction 75% reduction Exempt

(1) An initial inspection is mandated for a new vehicle purchase; exemption at the time of first vehicle inspection post-purchase applies only when the new inspection certificate is issued within 15 days following expiration of the old certificate. (2) For clean diesel passenger cars first registered on or after May 15, 2022, only vehicles complying with 2020 fuel efficiency standards will be exempt. (3) Only vehicles complying with 2020 fuel efficiency standards are eligible for the reductions/exemptions shown here. (4) Vehicles compliant +20% with 2030 fuel efficiency standards will also be exempt at the time of first vehicle inspection post-purchase (exemption applies only when the new inspection certificate is issued within 15 days following expiration of the old certificate).

● ENVIRONMENTAL PERFORMANCE-BASED TAX REDUCTIONS/EXEMPTIONS

Period in effect: April 1, 2021 through March 31, 2023.

- From October 1, 2019, an automotive environmental performance-based tax came into effect as an adjunct provision to the automobile tax and the mini-vehicle tax. It is imposed at the time of vehicle (passenger car, mini-vehicle, heavy-duty vehicle, etc.) purchase and calculated on the basis of the vehicle's environmental (i.e., fuel efficiency, emissions) performance and its purchase price.
- The tax applies to both new and used vehicles, with the exception of vehicles purchased for ¥500,000 or less, which are exempted from the tax.
- The fuel efficiency and other environmental performance criteria on the basis of which the tax's varying rates (e.g., from 0% to 3% for passenger vehicles and from 0% to 2% for commercial vehicles and mini-vehicles) have been determined are in line with criteria established in Japan's Energy Conservation Law. Highly fuel-efficient as well as electrified and other designated vehicles are exempted from the tax.

Environmental Performance-Based Tax Reductions/Exemptions for Private-Use Passenger Vehicles (including mini- and used vehicles)

Requirements	When Imposed	Tax Rates/Exemptions
<ul style="list-style-type: none"> Electric vehicles Fuel cell vehicles Natural gas vehicles (with NOx emissions down by 10% from 2009 emission standards, or complying with 2018 emission standards) 	Passenger cars, Mini-vehicles	Exempt
<ul style="list-style-type: none"> Plug-in hybrid vehicles Clean diesel vehicles 	Passenger cars	Exempt (1)
Gasoline vehicles/LPG vehicles (including hybrids)	Fuel efficiency	2030 Fuel Efficiency Standards (2)
	Emissions level	Under -40% -40% -35% -25% -15% Compliant
Down by 75% from 2005 standards or Down by 50% from 2018 standards	Passenger cars	3% 2% 1% Exempt
	Mini-vehicles	2% 1% Exempt

(1) For clean diesel passenger cars purchased on or after April 1, 2022, only vehicles complying with 2020 fuel efficiency standards and compliant -40% with 2030 fuel efficiency standards will be exempt. (2) Only vehicles complying with 2020 fuel efficiency standards are eligible for the reductions/exemptions shown here.

● TONNAGE TAX & ENVIRONMENTAL PERFORMANCE-BASED TAX REDUCTIONS for Vehicles Equipped with Advanced Safety Feature (ASV) Systems

The tax reductions detailed below are applied only once, on initial inspection mandated for new vehicle purchase.

Period in effect [Vehicles equipped with one designated system] Tonnage Tax: May 1, 2021 through April 30, 2024 (3 years)
Environmental Performance-Based Tax: April 1, 2021 through March 31, 2023 (2 years)

Eligible ASV systems Blind spot information system (BSIS)

Vehicle Type	Requirements	Reductions	
		Tonnage Tax	Environmental Performance-Based Tax
Heavy-duty truck (GVW>8t) Heavy-duty truck (GVW>8t) [tow truck]	Equipped with BSIS	25% reduction	¥1.75 million deduction from purchase price

● TONNAGE TAX & ENVIRONMENTAL PERFORMANCE-BASED TAX REDUCTIONS/EXEMPTIONS for Public-Use Assisted-Mobility Vehicles (AMVs)

The tax reductions/exemptions detailed below are applied only once, on initial inspection mandated for new vehicle purchase.

Period in effect Tonnage Tax: May 1, 2021 through March 31, 2024 (3 years)
Environmental Performance-Based Tax: April 1, 2021 through March 31, 2023 (2 years)

Vehicle Type & Requirements		Reductions/Exemptions	
		Tonnage Tax	Environmental Performance-Based Tax
Low-floor ("non-step") buses (1)		Exempt	¥10 million deduction from purchase price
Buses with ≥30-person occupancy equipped with an electric lift (1)	Airport shuttle buses		¥8 million deduction from purchase price
	Other		¥6.5 million deduction from purchase price
Buses with <30-person occupancy equipped with an electric lift (1)			¥2 million deduction from purchase price
Universal design-based taxis (2)			¥1 million deduction from purchase price

(1) For use in public/charter transport. (2) For use in public transport.

● FISCAL 2021 & 2022 SPECIAL AUTOMOBILE TAX REDUCTIONS (Passenger Cars and Trucks & Buses)

Requirements			Reduction (1)	
Passenger Cars	For private use	• Electric vehicles • Fuel cell vehicles • Natural gas vehicles (with NOx emissions down by 10% from 2009 emission standards, or complying with 2018 emission standards) • Plug-in hybrid vehicles	75% reduction	
	For commercial use	Gasoline vehicles/LPG vehicles (including hybrids)		50% reduction
	For commercial use	Diesel vehicles (including hybrids)	50% reduction	
		Gasoline vehicles/LPG vehicles (including hybrids)		
For commercial use	Diesel vehicles (including hybrids)	50% reduction		
	Diesel vehicles (including hybrids)		Compliant -30% with 2030 fuel efficiency standards and Compliant with 2009 or 2018 emission standards (2)	75% reduction
Trucks & Buses		• Electric vehicles • Fuel cell vehicles • Natural gas vehicles (with NOx emissions down by 10% from 2009 emission standards, or complying with 2018 emission standards) • Plug-in hybrid vehicles	75% reduction	

(1) Reductions effective on initial inspection mandated for new vehicle purchase are applied in the fiscal year following the year of purchase. This scheme also mandates a yearly 15% (10% for trucks and buses) surcharge on the automobile tax for gasoline and LPG-powered vehicles on the road 13 years or longer, and for diesel vehicles on the road 11 years or longer, since first registration. (2) Only vehicles complying with 2020 fuel efficiency standards are eligible for the reductions shown here.

● FISCAL 2021 & 2022 SPECIAL MINI-VEHICLE TAX REDUCTIONS (Minicars and Mini-Trucks) *

Requirements			Reduction (1)
Minicars	For private use	• Electric vehicles • Natural gas vehicles (with NOx emissions down by 10% from 2009 emission standards, or complying with 2018 emission standards)	75% reduction
	For commercial use	Gasoline vehicles (including hybrids)	50% reduction
		Gasoline vehicles (including hybrids)	25% reduction
Mini-Trucks		• Electric vehicles • Natural gas vehicles (with NOx emissions down by 10% from 2009 emission standards, or complying with 2018 emission standards)	75% reduction

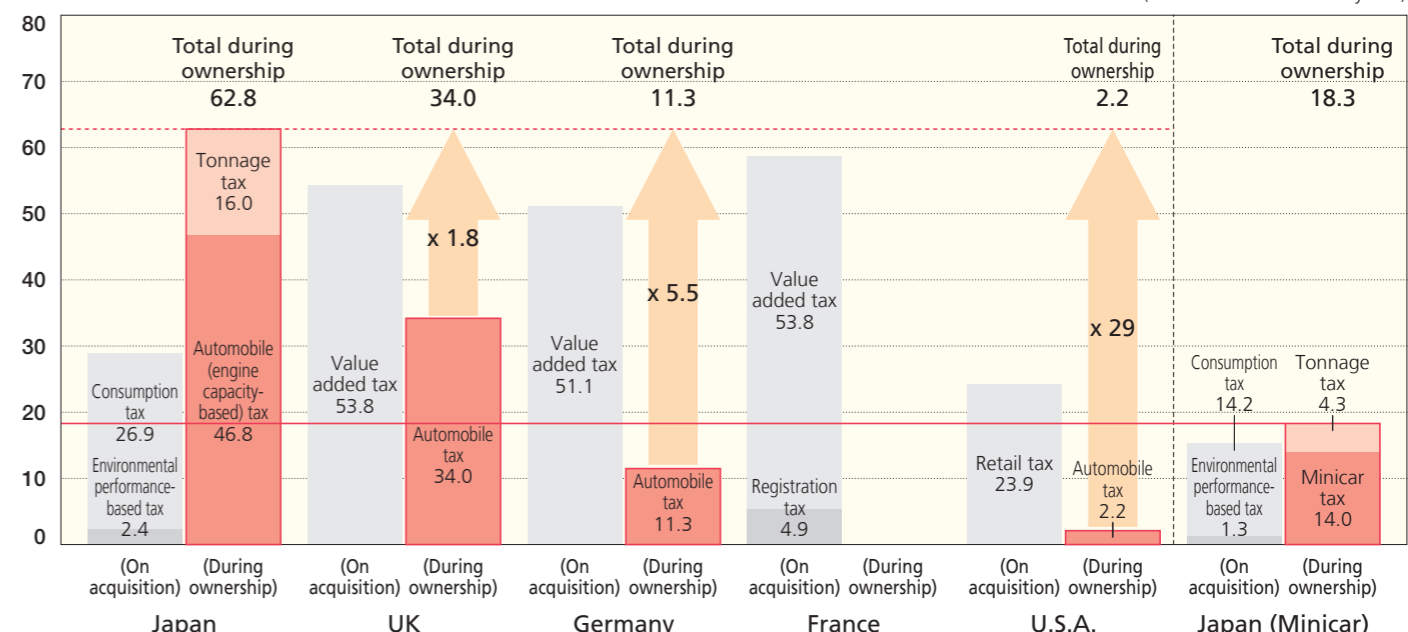

*Applies only to three- or four-wheeled mini-vehicles at the time of new vehicle registration.

(1) Reductions effective on initial inspection mandated for new vehicle purchase are applied in the fiscal year following the year of purchase. This scheme also mandates a yearly 20% surcharge on the mini-vehicle tax for mini-vehicles on the road 13 years or longer since first registration. (2) Only vehicles complying with 2020 fuel efficiency standards are eligible for the reductions shown here.

Automobile-Related Taxes Are Onerous

Consider the case of a passenger car costing 2.69 million yen when purchased new and providing 13 years of service to the original owner for private use. During that period, six different categories of taxes (including consumption tax at the time of vehicle purchase and on fuel) will be assessed on the owner/user, amounting to a grand total of roughly 1.8 million yen. In addition to these various taxes, the user will also be required to pay onerous expressway tolls, automobile insurance premiums (mandatory and optional), a recycling fee, periodic inspection fees, and maintenance costs.

● INTERNATIONAL COMPARISON OF TAXES

Assumptions: 1) Engine capacity: 2000cc. 2) GVW≤1.5t. 3) Purchase price: ¥2.69 million (¥1.42 million for a minicar). 4) Fuel consumption (JC08 test cycle-based): 21.4km/L (CO2 emissions: 108g/km). 5) France = Paris; U.S.A. = New York City. 6) France: Vehicle in no. 8 horsepower "class." 7) Service life: 13 years. 8) Currency exchange rates: EUR 1 = JPY 132, GBP 1 = JPY 158, USD 1 = JPY 113 (averaged April 2021-March 2022).
Notes: 1. Figures here are based on tax rates in effect as of April 2022. 2. Figures here do not take into account applicable incentives/surcharges, such as tax incentives for eco-friendly vehicles in Japan, if any.
Source: Japan Automobile Manufacturers Association

● TAXES ASSESSED ON PASSENGER CAR OWNERSHIP AND USE (PRIVATE) IN JAPAN (assuming a 13-year service life)

Assumptions: 1) A passenger car with 2000cc engine capacity and purchase price of ¥2.69 million (retail price, excluding consumption tax). 2) GVW≤1.5t. 3) Annual fuel consumption: 1,000 liters. 4) Tonnage tax imposed yearly, but collected only at time of mandatory vehicle inspection. 5) Tax amounts reflect rates in effect at April 1, 2022. 6) Consumption tax = 10% of retail price. 7) The recycling fee indicated is the average rate for a 2000cc passenger car.
Notes: 1. Estimated expressway tolls, mandatory insurance premium payments and recycling fee are included here because they can be considered similar to taxes. (Mandatory insurance premium values indicated in effect at April 1, 2022.) 2. Value of expressway tolls was estimated by JAMA based on expressway toll revenue in 2020.

Global Manufacturing Operations Expand Their Range

Japanese automobile manufacturers have developed local production operations, whether as wholly-owned subsidiaries or as joint ventures, in the United States, Europe, Southeast Asia, China, Russia and other countries with emerging markets. These operations contribute to the strengthening of local economies through employment creation, local parts purchasing and, in many cases, export revenue for the host countries. Locally produced automobile parts such as engines and transmissions, as well as finished vehicles of some models, are exported to Japan and other destinations.

A Total of 82.7 Million New Motor Vehicles Sold Globally

In 2021 new motor vehicle registrations (excluding motorcycles) increased 5.0% from the previous year to a global total of 82.68 million units. Vehicle sales surged in Indonesia (up 66.7% to 887,000 units), India (up 27.9% to 3.76 million units), and Egypt (up 26.4% to 278,000 units).

Automobile Customs Tariffs, EPAs-FTAs

Following repeated reductions in tariff rates, import tariffs in Japan on finished motor vehicles and auto parts were abolished in 1978. Many other countries continue to impose tariffs on imported vehicles: for example, the United States imposes a 25% tariff on imported trucks and China levies a 15% tariff on finished vehicles. Aiming to abolish customs tariffs and thereby to liberalize and facilitate trade and investment, the Japanese government promotes the establishment of economic partnership agreements (EPAs) and free trade agreements (FTAs). In recent years, Japan has signed several multilateral trade accords including the Comprehensive and Progressive Agreement for Trans-Pacific Partnership (CPTPP) with ten countries, the Regional Comprehensive Economic Partnership (RCEP) with fourteen countries, and the Japan-European Union EPA, thereby significantly expanding the scope of its international trade agreements.

● AUTOMOBILE CUSTOMS TARIFFS, JAPAN/U.S.A./CHINA

As of June 2022

	Passenger Cars	Trucks	Buses	Auto Parts, Etc. (including vehicle bodies)
Japan	None	None	None	None
U.S.A.	2.5%	25% Cab chassis, from 5t up to 20t in GVW: 4%	2%	2.5%
China	15%	15%	15%	6%

Source: Japan Automobile Manufacturers Association

● STATUS OF JAPAN'S ENGAGEMENT IN EPAs/FTAs

■ EPA/FTA signed or in force ■ EPA/FTA under negotiation/other

As of June 2022

Note: Negotiations are postponed/suspended with GCC, Korea, and Canada.

Source: Ministry of Foreign Affairs

● AUTOMOBILE CUSTOMS TARIFFS under the Japan-EU EPA and CPTPP

	Passenger Cars	Trucks	Buses	Auto Parts, Etc. (including vehicle bodies)
Japan-EU EPA (in effect as of Feb. 2019)	[10%] To be abolished in 8 years.	Gasoline trucks≥2800cc, Diesel trucks≥2500cc: [22%] Gasoline trucks<2800cc, Diesel trucks<2500cc: [10%] To be abolished in 8 years.	Gasoline buses≥2800cc, Diesel buses≥2500cc: [16%] Gasoline buses<2800cc, Diesel buses<2500cc: [10%] To be abolished in 13 years.	[3-4.5%] Immediately abolished for more than 90% (in value terms).
CPTPP (in effect as of Dec. 2018)	Example: Canada	[6.1%] Large-sized gasoline trucks: To be abolished in 6 years. Other trucks: To be abolished in 11 years.	[6.1%] To be abolished in 11 years.	[6.0%] Immediately abolished for 87.5% (in value terms).
	Example: Vietnam	[77%] Over 3000cc: To be abolished in 10 years. 3000cc or under: To be abolished in 13 years.	[20-70%] To be abolished in 12-13 years.	[5%] To be abolished in 13 years.

Note: Figures in brackets represent tariff rates imposed prior to reduction/abolition.

The Tokyo Motor Show was launched as the All Japan Motor Show in 1954 at Hibiya Park in central Tokyo. Subsequently, as the show grew in step with the development of Japan's automobile industry, its venues were upscaled. In 1959 it moved to the Japan Trade Center located in Tokyo's Harumi area; in 1989 to Makuhari Messe (the Nippon Convention Center) in Chiba Prefecture; and in 2011 it moved again, to its current venue at Tokyo Big Sight (officially, the Tokyo International Exhibition Center) in Ariake, where it has established itself as a top-level international motor show on a par with those in Europe and the United States.

The 1st Tokyo Motor Show, Hibiya Park, 1954

The 6th Tokyo Motor Show, Japan Trade Center, 1959

The 28th Tokyo Motor Show, Makuhari Messe, 1989

Conceived as a showcase for new mobility, the 46th Tokyo Motor Show in 2019 saw the scope of participation expanded to include representatives of other industries, thereby turning the exhibition into a multi-industry event comprising 192 companies and organizations and attracting more than 1.3 million visitors.

The 46th Tokyo Motor Show, Tokyo Big Sight, 2019

The Drone Show* @ the 46th Tokyo Motor Show

*The Drone Show was conducted with the permission, approval and guidance of the East Japan Civil Aviation Bureau of Japan's Ministry of Land, Infrastructure, Transport and Tourism, the Japan Coast Guard's 3rd Regional Coast Guard Headquarters, and the Tokyo Metropolitan Government's Bureau of Port and Harbor.

Notes: 1. "Number of Vehicles Exhibited" includes four-wheeled and three-wheeled vehicles and motorcycles but excludes parts, machine tools, and related products.
 2. "Site Area" from 2009 represents only the indoor area.
 3. In 2019, the venue was expanded (to include the "Mega Web" site and Symbol Promenade Park) and there was no official announcement of the number of vehicles exhibited.

See <https://www.tokyo-motorshow.com/en/history/> for details.

The organizers of the Tokyo Motor Show are now working on its next edition, to be held in the autumn of 2023—a show that will stretch beyond the framework of new mobility, again with multi-industry representation including the participation of startups. Stay tuned!
